Objective

Research, plan and advocate technical and community policy for a sustainable future.

Management Principles

Focus on the mission: As a team member, management sponsor, consulting champion or project manager, I have assisted organizations with deadlines, project plans and budgets to implement productivity solutions and help them continue with their "real jobs" as quickly and painlessly as possible. I have applied and managed budgets, products and systems. Team building and working as a team member is a key discipline.

Use what exists: I encourage better understanding and use of technology, systems and processes already in place to anticipate and better manage inevitable evolution of technical, mission or support applications. Improving productivity and reducing costs, for instance, more and more often involves transition to open source, cloud-based, personal technology and/or social media.

Grow with the flow: I have helped organizations and professionals in publishing, education, health care, finance, law, technology and environment in business and personal settings to choose, apply and manage appropriate new technology, software and hardware -- with attending understandings, budgets, policies and procedures.

Technical Background, Skills

Geothermal Studies, research, advocacy MS Office, Word, Excel, Powerpoint, Access, Outlook, Project OpenOffice, Writer, Base, Calc, Draw, Impress, Math Mozilla, Firefox, SeaMonkey, Explorer, Chrome, Safari Perl, ASP, PHP, Javascript, Visual Basic, NetBeans SQLServer, DB/2, MySQL, DBI, CiviCRM AVS Suite: audio, video, image, conversion W3C: CGI, HTTP, HTTPS, RSS, SGML, HTML, XHTML, XML, CSS, XSLT, XPATH, LDAP Application frameworks (jEdit, Kimodo, NetBeans, Visual Studio) Accounting/POS/e-commerce Object oriented analysis, modeling & design tools Application testing, optimization, security
